

Your Strategic IT Security Partner

Your IT Security Partner

Brussels based EuroConseils Sprl offers together with its Finnish sister company Conseils Oy and technical partner company XCure Solutions Ltd. highly skilled consultancy and advisory services and solutions for public and private organisations in the strategic area of trust, security, identity management and also EU affairs related to European information society programmes, initiatives and best-practices. We offer only solutions based on the most innovative, advanced and proven best practices and standards with highest conceptual and technological security levels to protect any valuable asset, data and user privacy.

Our technical service partner XCure Solutions Ltd. is an expert organisation formed by highly qualified and experienced IT security professionals. Together our professionals offer a wide range of expert services in fields of IT security management, security audit and design, security application development and integration, and system implementation. Our team brings together a wealth of experience in complex IT Security services. All our professionals are CISA and, or CISSP certified.

Our activity area covers Europe and we operate from our Helsinki offices in Finland and from our Brussels and Leuven offices in Belgium.

The RegioPKI® Platform

The RegioPKI® platform service gives a comprehensive approach to regionally developed, initiated and completed eServices. It enables a bottom-up development process for eGovernment and paperless process by providing all necessary tools and knowledge in order to achieve highly interoperable and locally manageable eServices based on trust and security.

Our Professional Services

We provide professional expert services for Public Key Infrastructures (PKI) and related project management, security design and system implementations.

Our service portfolio consists of the following consultancy services:

- Security solutions and designs for eGovernment and eHealth
- Identity management Roadmap service
- Identity management and digital signature interoperability studies, evaluation, design and audit
- European interoperability for eServices advisory service

We also provide highly specialised training programmes:

- Identity management and cross-platform identity federation
- Interoperability of digital signature systems and solutions
- PKI training for eGovernment applications
- Assessing, designing and planning security solutions
- Strategy workshops for regional paperless processes
- Workshops for achieving technology interoperability in identity management, federation and digital signatures

Our Solutions

We offer turn-key solutions for successful PKI, digital signature, strong authentication, encryption and smart card projects.

Our way of operating let's you choose which technology you want to implement, and our own solutions are there to support you in your endeavour to work with solutions you already have or have chosen to work with. Whatever your choice, we will support you in achieving interoperable and secure systems.

For example: our PKI middleware solution enables you to choose any type of smartcard or USB-token solution you need, and our Governikus platforms makes it possible to integrate legally binding and interoperable digital signatures and encryption on any platform and application. Also our PKI platform solutions enable you to integrate any directory service or identity management framework.
