

Identity Management Roadmap

A *Strategic Planning*

B *Roadmap to Success*

C *Achieving Success*

Your IT Security Partner

EuroConseils Sprl offers highly skilled consultancy and advisory services and solutions for public and private organisations in the strategic area of trust, security and identity management. We offer only solutions based on the most innovative, advanced and proven best practices and standards with highest conceptual and technological security levels to protect any valuable asset, data and user privacy.

Our technical service partner XCure Solutions Ltd. is an expert organization formed by highly qualified and experienced IT security professionals. Together our professionals offer a wide range of expert services in fields of IT security management, security audit and design, security application development and integration, and system implementation. Our team brings together a wealth of experience in complex IT Security services. All our professionals are CISA and/or CISSP certified.

Our activity area covers Europe and we operate from our Helsinki offices in Finland and from our Brussels and Leuven offices in Belgium.

The RegioPKI® Platform

RegioPKI®

The RegioPKI® platform service gives a comprehensive approach to regionally developed, initiated and completed eServices. It enables a bottom-up development process for eGovernment and paperless process by providing all necessary tools and knowledge in order to achieve highly interoperable and locally manageable eServices based on trust and security.

A Global View on Identity Management

Identity management is seen as something useful, but still too complicated in several organizations. We provide your organisation with our experience in the fields of authentication and user lifecycle management to set up practical roadmap for identity management. **Together with our certified experts your organisation can achieve a cost effective, well planned and a future oriented roadmap to identity and access management that enables interoperability and trust between your business partners and your customers.**

A Business Oriented IdM Roadmap

Our roadmap service focuses on business needs for building trust within the enterprise, between business partners and customers, and other interest groups. Building a *Chain of Trust* enables identity federation and single-sign-on services, which are essential components of a highly efficient and secure IT infrastructure.

For building a *Chain of Trust*, interoperability between business partner groups has to be achieved using commonly agreed standards:

- Common standardised approach to identity management between business partners and interest groups.
- Technical analysis of the organisation partner group identity management situation
- Combining the goals and methods to the unified roadmap, without affecting any of the organisations internal IdM planning
- Creation of an architectural overview on how these partner groups will federate user accounts in an interoperable way
- Definitions of a common standard IdM protocol transformation via hub or translator
